Open D	944 Race Cars

Benchmark times represent what we believe is a very high standard for each class. They aim to represent an equivalent standard of performance, and therefore allow us to make comparisons between cars in different classes. They are generally based on the best times recorded for the most recent 2 years for cars in a class and reflect the current makeup of the cars in that class. Where there is a small sample of results in a class or we have not used a circuit for a year or more, we may include earlier years - our aim is to avoid large fluctuations year on year. Where we have adjusted the Class groupings, we have used the best times recorded in the past 2 years for cars which would fall into the new class.
